*Introduction deck*

# truex

## An AI agent platform for enterprise *execution*

- October 2026
- Early-stage venture

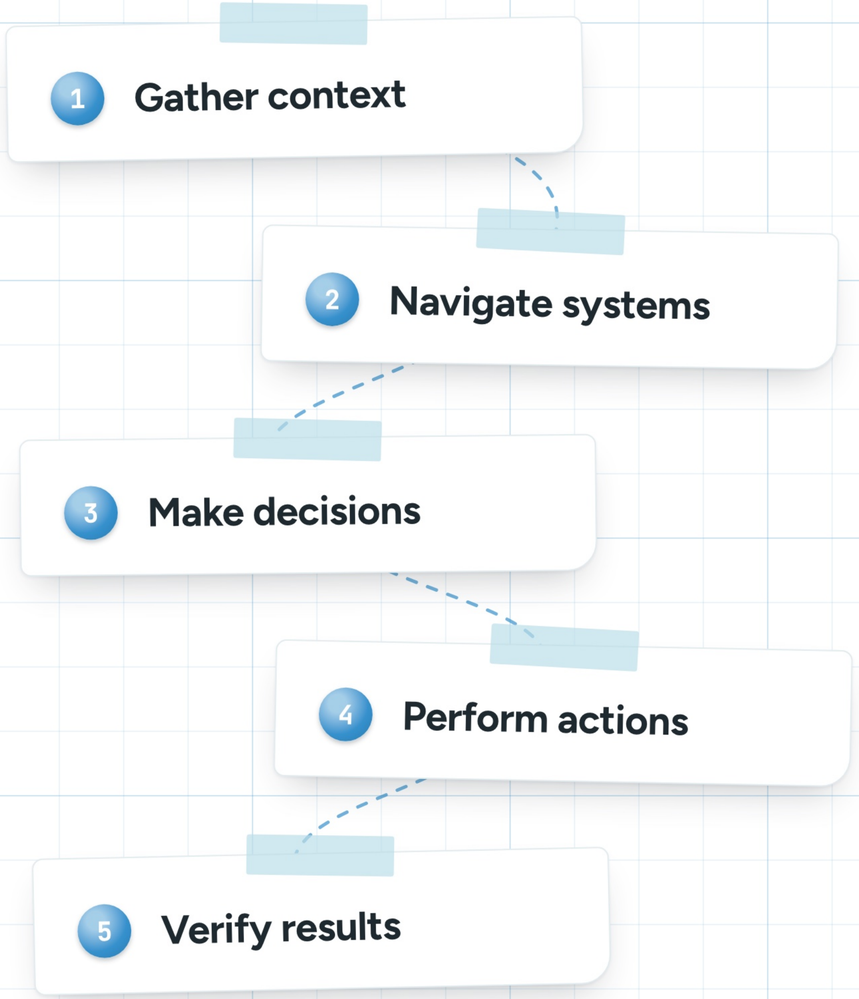

*1 · The problem*

# AI can reason. Enterprise work still depends on *manual execution.*

Across critical business workflows, teams must gather context, navigate systems, make decisions, perform actions, and verify results.

The challenge is no longer just generating intelligence. **It is turning that intelligence into reliable enterprise execution.**

*2 · Market pain points*

# Enterprise work *breaks* between systems, people, and decisions.

***The result:***

Valuable expertise is consumed by coordination, repetitive work, and risk management **instead of higher-value decisions.**

01

### Fragmented Context

Critical knowledge is scattered across applications, documents, databases, and people.

02

### Disconnected Workflows

Business processes require constant coordination between teams and systems.

03

### High-Stakes Execution

Errors can affect revenue, customers, compliance, and business continuity.

04

### Difficult Verification

Every consequential action needs reliable evidence, accountability, and oversight.

*3 · The market shift*

# AI is moving from answering questions to *completing work.*

| COMPANY | MARKET FOCUS | DIRECTION |
|---|---|---|
| **Harvey** | Legal | Research, drafting, review |
| **Sierra** | Customer operations | Conversations, decisions, actions |
| **Gumloop** | Workflow automation | Connected agents and automated tasks |
| **Nova Intelligence** | Enterprise systems / SAP | Analysis, modernization, development |
| **Enterprise platforms** | SAP, Microsoft, Salesforce, ServiceNow | Agents embedded into business workflows |

*Different starting points. One direction.*

From software that helps people work to **software that can perform work under human oversight.**

*4 · Market signals*

# Enterprise AI agents are attracting significant capital — and *generating revenue.*

Selected publicly reported company metrics, as of October 2026.

| COMPANY | LATEST REPORTED VALUATION | SELECTED 2026 FUNDING ROUND | PUBLISHED ARR |
|---|---|---|---|
| **Harvey** | $15.5B | $550M | Over $100M (Aug 2025) |
| **Sierra** | Over $15B | $950M | Over $150M (Feb 2026) |
| **Gumloop** | Not disclosed | $50M | Not disclosed |
| **Nova Intelligence** | Not disclosed | $31.5M | Not disclosed |

*The figures are company-specific, disclosed at different dates, and do not establish Truex's potential valuation or market share.*

### *Market takeaway*

Investors are backing enterprise AI companies across specialized industries and horizontal automation. **Reported recurring revenue also demonstrates real customer spending in parts of this category.**

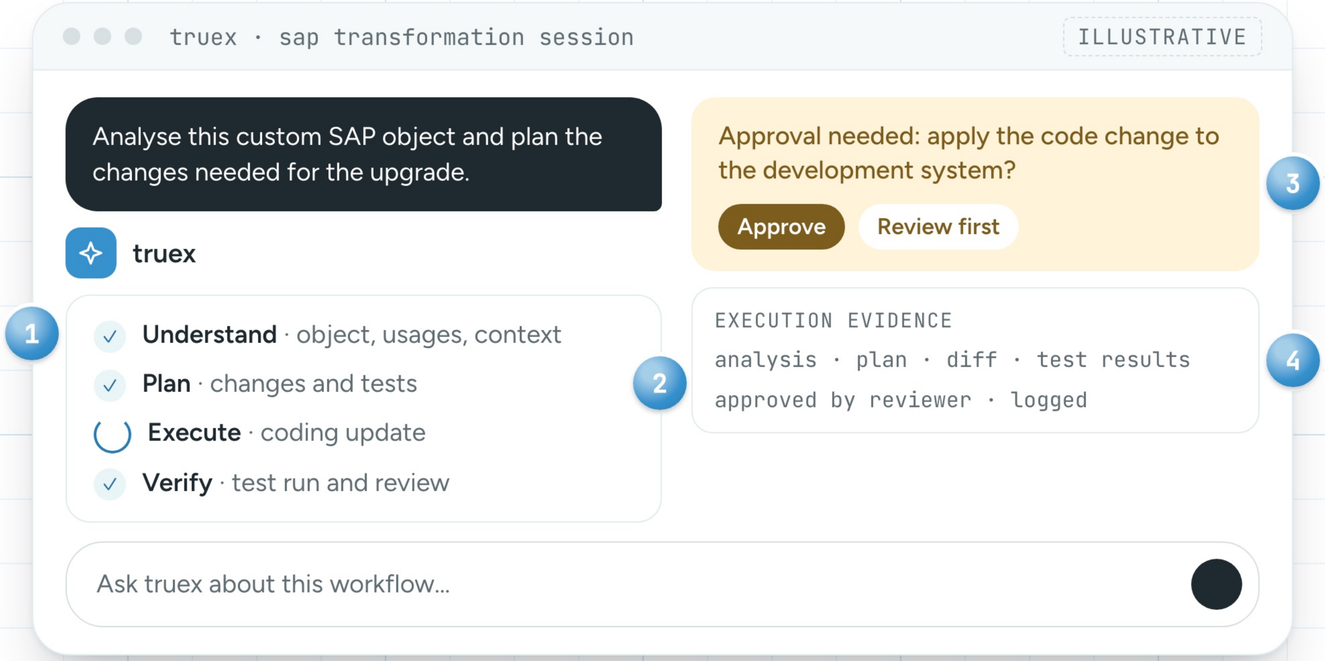

## 5 · Introducing truex

# From enterprise intent to intelligent *execution.*

Truex is an AI agent platform we're building to execute complex enterprise workflows with business context, connected tools, and human oversight.

**Our first focus:**
**SAP transformation.**

Connecting analysis, coding, and testing in one reviewable workflow.

THE PROPOSED EXECUTION LOOP

1. **Understand**
   Enterprise integrations and contextual knowledge.
2. **Plan**
   Complex workflows, shaped by business context.
3. **Execute**
   Connected tools, authorized access, approvals.
4. **Verify**
   Human oversight and reviewable execution evidence.

Powered by enterprise integrations, contextual knowledge, authorized access, approvals, and reviewable execution evidence.

*6 · Roadmap*

# Start with SAP. Expand across industries. *Unify enterprise operations.*

1 — Now

### Solve complex SAP transformation challenges

Build and validate AI-driven analysis, coding, and testing workflows that help enterprise teams modernize critical systems.

2 — Next

### Expand into specialized industries

Extend into high-value workflows across legal, healthcare, financial services, and other complex industries, guided by customer demand and domain expertise.

3 — Long term

### Become a unified enterprise operational layer

Our long-term ambition is one platform through which organizations can coordinate agents, enterprise context, systems, and governed execution across their business.

*Start with focused execution. Build toward enterprise-wide operations.*

*7 · Who is building it*

# An ambitious vision. An *early-stage builder.*

Truex is being built by a solo founder with the ambition to make enterprise AI agents useful for real operational work.

We are early in the journey, and our immediate priority is validating the product with real enterprise challenges.

### *Our next milestone*

Collaborate with enterprise teams to validate one scoped SAP transformation workflow against real engineering and quality requirements.

*An early-stage demonstration of the product under development. Capabilities and production suitability are still being validated.*

*8 · Get involved*

# Know someone who could help shape the future of *enterprise AI?*

We are looking for a few meaningful connections and early partners.

**1 Enterprise Connections**
Introduce us to SAP transformation leaders, enterprise technology decision-makers, or organizations facing complex operational challenges.

**2 Early Design Partners**
Work directly with the founder to explore real workflows, shape priorities, and evaluate an early pilot.

**3 Investors & Strategic Backers**
Connect with us if you invest in early-stage enterprise software or can introduce us to someone who does.

**4 Development & Research Support**
Help accelerate product development through AI tooling, Claude Max access or equivalent research and infrastructure sponsorship.
